PROFESSIONAL EXPERIENCE

Data Analytics Developer | Colliers Engineering & Design, USA Jul 2024 – Present

- **Fabric platform ownership:** Expanded and supported the Microsoft Fabric environment (pipelines, dataflows, warehouses, semantic models, security models, deployment, and refresh automation) and wrote documentation that improved supportability and reduced key-person dependency.
- **End-to-end Power BI delivery:** Built Power BI and paginated reports for Finance, HR, Operations, Resource Planning, Safety, and acquisition teams. Automated report distribution so admins manage email subscriptions without manual effort.
- **Multi-source integration & data quality:** Connected Power BI to SQL-based systems, files, SharePoint, Azure, and other databases; built Power Query transformations and DAX measures and cleansed data to ensure accuracy.
- **Security & administration:** Implemented row-level security and supported governance initiatives (restricted reporting environments, data access controls); handled Power BI Service administration, deployment, refresh and subscription troubleshooting, and access requests across departments.
- **Business-critical transition project:** Primary resource for the Excel-based Workplan system used for internal resource planning: owned development, testing, deployment, user support, and requirements gathering, while supporting the organization's move to a web-based planning platform.
- **Mentorship:** Supported the internship program through project scoping, progress reviews, and technical guidance on Power BI and SQL.

Data Analyst | Russ Davis Wholesale, Minnesota, USA Nov 2021 – Jul 2024

- Reduced weekly manual reporting from 15 hours to 3 (80%) by redesigning reports into automated, SQL-driven solutions.
- Built company-wide Power BI dashboards (sales, fuel, operational KPIs) using DAX and Power Query, improving data-driven decisions across sales and operations.
- Used SQL Server to query internal data and integrate external sources and budgeted goals; managed MS Access for daily transactions and EIA fuel data; scraped local fuel prices with Python.
- Delivered regular and ad hoc reporting with Produce Pro, IBM Cognos, VBA, Excel, Python, Access, and SQL Server. Championed SQL Server adoption and absorbed the workload of a vacant position.

Research Intern | Hazelden Betty Ford Foundation, Butler Center for Research, USA May – Aug 2021

- Automated a lengthy MS Word report with VBA, cutting assembly time by several weeks per instance.
- Contributed to a national patient demographics report for leadership covering all locations; managed COVID-19 virtual-programming transition dates by cross-referencing EHR data.

EDUCATION

M.S. Analytics | Georgia Institute of Technology (online), USA Expected 2028

GPA: 4.0/4.0 to date (7/11 courses). **Coursework**: Data Analytics in Business; Computing for Data Analysis (Python); Introduction to Analytics Modeling; Computational Data Analysis (Machine Learning); Data Mining and Statistical Learning; Simulation; Business Fundamentals for Analytics.

B.S. Data Science, Minor in Computer Science | Winona State University, Minnesota, USA 2021

Dean's List all semesters; Distinguished Graduate, Department of Mathematics and Statistics; Outstanding Student, College of Science and Engineering.

TECHNICAL SKILLS

- **BI & Data Platform:** Microsoft Fabric (pipelines, dataflows, warehouses, semantic models, deployment); Power BI (advanced DAX, Power Query, data modeling, row-level security, Service/workspace administration, REST APIs, paginated reports); Tableau
- **Data & Databases:** SQL Server, MS Access, Azure, SharePoint, flat files; ETL, multi-source integration, data validation and cleansing
- **Programming & Automation:** Python (automation, web scraping); Advanced Excel (VBA, macros, complex formulas)
